Encoriva Token (ENCV) White Paper

Version 1.0 · Nov 16, 2026 · @Sean Whitlow

> **Important notice.** ENCV is a utility token. You use it to pay for, unlock and get rewarded on the Encoriva platform. It is not a share, a security or an investment. Holding it gives no ownership in Encoriva, no right to profits or dividends, and no promise of future value. Nothing in this paper is financial, legal or tax advice. Read the Risks and Legal notice sections before you take part.

Abstract

ENCV is the platform token of Encoriva, a music platform for independent artists, producers, engineers and fans. It is an ERC-20 token on Ethereum with a fixed supply of 100,000,000. No more can ever be created.

Artists, producers and fans earn ENCV for real activity on the platform: streaming, uploading, collaborating, promoting and bringing in new members. They spend it inside Encoriva on Encoriva's own services, such as radio submissions, Pro features and live events. The goal is simple: more of the value the community creates stays with the people who create it.

The problem

Independent artists do most of the work and keep the least of the value. The music business is set up to reward the middle, not the makers.

- **Value flows out.** Streams, beat sales and promotion each pass through separate services, and each one takes a cut.
- **Fans get nothing back.** A fan who streams, shares and shows up every week gets the same as someone who listened once.
- **Collaboration is messy.** Splits, credits and payments between producers, engineers and artists are often tracked informally, if at all.
- **Promotion is pay-to-play.** Radio and playlist slots are hard to reach and are filled with spam, so good music gets buried.

The Encoriva platform

Encoriva already brings the whole independent music workflow into one place. ENCV ties these features together with one shared currency.

Area	What members do there
Listen	Stream music, follow the industry pulse feed, join listening parties, watch Encoriva TV
Create	Upload music, use the Studio and Sound Lab, make cover art
Sell and collaborate	Buy and sell beats, sign split sheets, write contracts
Promote	Submit to Power 813 The Beat radio, use the AI promo manager, social hub and release planner
Work	Hire engineers, find gigs, reach the A&R Hub
Grow	Take Academy courses, get verified, become a Brand Ambassador, upgrade to Encoriva Pro

Token specifications

Property	Value
Name	Encoriva Token
Ticker	ENCV
Standard	ERC-20
Network	Ethereum mainnet
Total supply	100,000,000 ENCV, fixed
Decimals	18
Minting after launch	None. The contract has no mint function.

Property	Value
Admin keys	None. No owner can pause, freeze or change balances.
Extras	Burnable (holders can destroy their own tokens); Permit (gasless approvals, EIP-2612)
Contract address	0x2e82b0d3d2209aba1a7cd16b2145ae93bff3e7d7 (deployed November 17, 2026; source code verified on Etherscan)

Token utility

ENCV goes in a loop: members earn it by adding to the platform and spend it on platform services. Because spending happens inside Encoriva, the token always has a use.

How members earn ENCV

Activity	Who	Example starting reward
Streaming tracks (capped daily to stop farming)	Fans	0.05 ENCV per full stream
Attending a listening party	Fans	10 ENCV
Sharing a release that brings a new listener	Fans, artists	5 ENCV
Uploading a new release	Artists	25 ENCV
Finishing a collaboration with a signed split sheet	Artists, producers	25 ENCV each
Referring a member who verifies	Everyone	50 ENCV
Brand Ambassador milestones	Ambassadors	Set per campaign
Completing an Academy course	Everyone	15 ENCV

Rates are starting points. Encoriva will adjust them over time so the rewards pool lasts its full four years.

What members spend ENCV on

- **Encoriva services:** use Encoriva's own tools, such as the cover art studio, Academy courses and promo tools.
- **Radio submissions:** submitting to Power 813 The Beat costs a small amount of ENCV, which cuts spam.
- **Encoriva Pro:** pay for Pro in ENCV at a discount, or unlock Pro features by holding a set amount.
- **Community boosts:** boost a track in the community vote for radio rotation.
- **Access:** get into VIP listening parties, early releases and Encoriva TV premieres.

Verification

Rewards for streams and referrals go only to verified accounts, with daily caps and bot checks. This keeps fake activity from draining the pool.

Launch rules

At launch, ENCV stays inside Encoriva. These rules follow Encoriva's legal review and change only with counsel's approval.

- ENCV starts as off-chain Encoriva Credits with no cash value.
- Members earn ENCV and spend it only on Encoriva's own services and benefits.
- Members cannot send ENCV to each other, move it to outside wallets, or exchange it for cash or crypto.
- Tips, beat sales and engineer bookings between members are paid in U.S. dollars through a licensed payment provider.
- Every award and redemption is recorded, along with the reason it was earned.
- The full rules are in the ENCV Rewards Terms and the Founder Pass NFT Terms.

Encoriva NFTs

Alongside ENCV, Encoriva will issue NFTs that prove access, ownership of a license, or an achievement. Each one does something on the platform. None is sold as an investment.

NFT	What it does	Supply	Can be resold
Founder Pass	$49 membership: 50% off Encoriva Pro, VIP listening parties, a numbered founder badge, early feature access, and 500 promotional ENCV credits usable on Encoriva	1,000, numbered	Yes
Beat License	Proves who licensed a beat, when, and with which rights	One per sale	Only if the license allows it
Collectible Release	Limited edition of a track or album with stems, video or a signed digital cover	Set by the artist	Yes
Event Ticket	Entry to a listening party or show, kept as a keepsake afterward	One per seat	Until the event
Achievement Badge	Marks a milestone: first Power 813 radio play, verified artist, an Academy course finished	Unlimited	No (locked to the earner)

How NFTs connect to ENCV

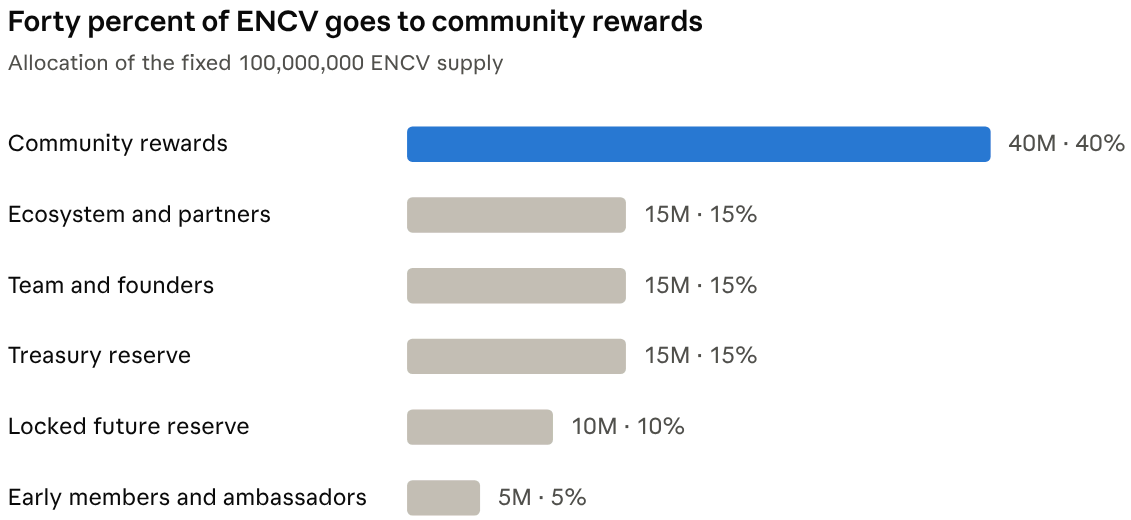

- Founder Pass holders receive promotional ENCV credits, usable only within Encoriva.
- Members can redeem ENCV for tickets to Encoriva-run events. Artists sell Beat Licenses and Collectible Releases in U.S. dollars.
- Achievement Badges can unlock higher ENCV reward rates.

Design rules

- **Built on standard contracts.** NFTs use the ERC-721 and ERC-1155 standards from OpenZeppelin, on Ethereum.
- **No revenue-share NFTs.** Encoriva will not sell NFTs that pay holders a share of streaming or sales income, because those can be treated as securities.
- **Same timing as ENCV.** The Founder Pass Terms were approved by counsel and signed on November 17, 2026. Other NFTs launch only after their own legal review.

Tokenomics

The full 100,000,000 ENCV is created once, at launch. Most of it goes back to the community, and insiders are locked up so they cannot sell early.

Proposed allocation · 100,000,000 ENCV

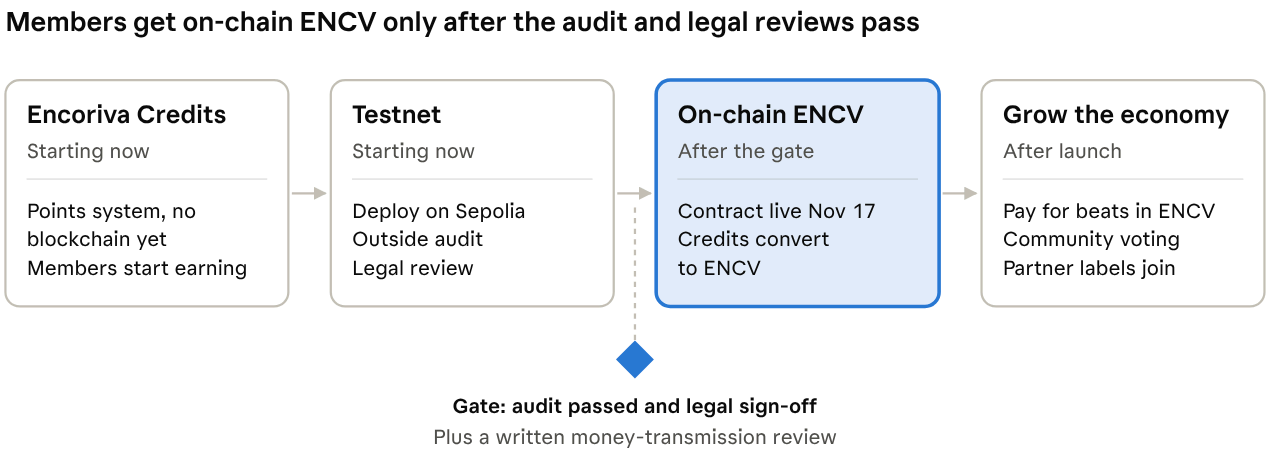

Release schedule

- **Community rewards:** paid out monthly over 48 months from a rewards wallet, about 833,333 ENCV a month.
- **Ecosystem and partners:** grants to partner labels such as United Music Mafia, radio partners and producers. Each grant vests over 12 months.
- **Team and founders:** to be locked for 12 months, then released monthly over the next 36 months through an on-chain vesting contract that will be set up before any team tokens leave the treasury.
- **Treasury reserve:** held in the Encoriva Treasury Safe for operations and emergencies. Encoriva publishes a report on its use every quarter.
- **Locked future reserve:** locked and unused. It is released only if counsel later approves transfers and trading.
- **Early members and ambassadors:** given at launch to members who earned Encoriva Credits before the token existed, and to Brand Ambassadors.

At launch, all 100,000,000 ENCV sit in the Encoriva Treasury Safe. Before any distribution, each allocation will move to its own public wallet, and the team allocation into its vesting contract. Anyone can check these balances on Etherscan.

Roadmap

The Encoriva platform is now fully live. Members start by earning off-chain Encoriva Credits, so the reward system is proven before any token exists.

Roadmap · 4 phases, 1 gate · milestone-based

The ENCV contract was deployed to Ethereum mainnet on November 17, 2026, with the full supply held in the Encoriva Treasury. Credits earned in phase 1 convert to on-chain ENCV only after the audit, legal sign-off and money-transmission review are complete. The roadmap moves by milestones, not fixed dates. Each phase starts only when the one before it is finished.

Security and the smart contract

The ENCV contract is kept small on purpose. Fewer features means fewer ways for it to break.

- **Audited building blocks.** It is built on OpenZeppelin Contracts, the most widely used and audited library for Ethereum tokens.
- **No admin powers.** The contract has no owner and no mint, pause or blacklist functions. Once deployed, nobody, including Encoriva, can create more ENCV or touch anyone's balance.
- **Tested before launch.** It was deployed and checked on the Sepolia test network before the mainnet launch on November 17, 2026.
- **Independent review.** The contract has not yet had an outside audit. An independent auditor will review it before any ENCV is distributed to members on-chain, and the report will be published.

- **Public code.** The source code is verified on Etherscan so anyone can read it.
- **Protected wallets.** The full supply is held in the Encoriva Treasury, a Safe multi-signature wallet (0x31B15aE0854F8693aC6Bf4bb75845288Ad70d1E9). It currently has two signers, with one approval required, so losing one key does not lose the supply. Encoriva plans to move to two approvals out of three signers.

Community voting

ENCV holders get a voice in community decisions. Voting is free, and nobody spends tokens to vote.

- **What holders vote on:** featured artists and radio rotation picks, new features, which partner labels join, and community event themes.
- **How it works:** votes run on Snapshot, a free off-chain voting tool. Each verified account's vote is weighted by its ENCV, with a cap so large holders cannot decide everything alone.
- **What stays with Encoriva:** company operations, legal matters and safety decisions stay with the Encoriva team.

Risks

Taking part in ENCV carries real risks. Anyone getting ENCV should understand them first.

- **No guaranteed value.** ENCV may be worth nothing outside Encoriva, and its price can drop to zero if it is ever traded.
- **Regulation.** Crypto laws are changing. New rules could limit how ENCV is offered or used in some places.
- **Technical risk.** Smart contracts, wallets and the Ethereum network can fail or be attacked, even after audits.
- **Lost keys.** Tokens sent to the wrong address or held in a wallet whose keys are lost cannot be recovered.
- **Platform risk.** ENCV's usefulness depends on Encoriva growing and staying in operation.
- **Network fees.** Ethereum gas fees are low today but can rise during busy periods.

Legal notice

This white paper describes a planned utility token and may change before launch. It is not an offer to sell securities or a request for investment, in any country.

- ENCV is designed to be used on the Encoriva platform. It is not sold as a way to make a profit, and Encoriva makes no promise that it will rise in value.
- Encoriva does not plan a public token sale. ENCV is given out mainly as rewards for activity on the platform.
- ENCV and Founder Passes launch in the United States first. Other countries are added only after legal review, and members are screened against U.S. sanctions lists. Members are responsible for tax on rewards they receive.
- Encoriva's legal counsel reviewed this launch structure in November 2026. Encoriva may change the design to stay compliant.
